

Kawthoolei Ecosystem Resilience and Biodiversity Watch Application (KERBWA)

KERBWA is a digital forest monitoring tool used by Indigenous Karen communities across Kawthoolei, Myanmar to monitor and report illegal activities, including:

Logging

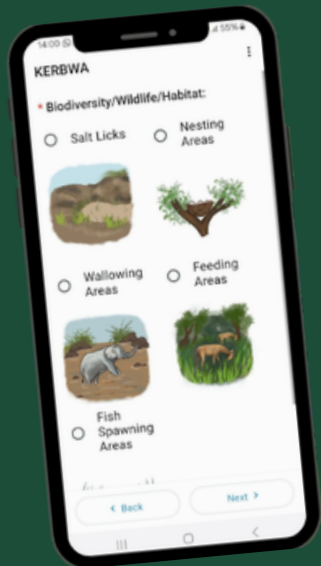

Mining

Hunting

Records biodiversity

Data is shared with local community leaders, policy makers, and the wider Karen public to support forest protection and biodiversity conservation.

KERBWA:

- Empowers Indigenous Karen to safeguard their forests and monitor biodiversity
- Strengthens forest governance by generating data that guides policy action
- Deepens community ownership and participation in forest stewardship
